EDUCATION

BACHELOR'S DEGREE:

*Rikkyo University
Japan (2018)*

WEB & MOBILE APP DEVELOPMENT DIPLOMA:

Cornerstone College, Vancouver, BC (2023)

SOCIAL

ABOUT

Full stack developer specializing in C#, JavaScript(React, Node.js) and SQL development.
I have 5+ years of experience developing complex applications and had the opportunity to manage projects based on C# and JavaScript.
I'm looking to work with small or large teams in agile startup environments.

EXPERIENCE

FREELANCE DEVELOPER

Multiple Startups | Japan |July 2021 - Current

About

I'm working for multiple startups as a freelance developer while attending CICCC.
My tasks were building Shopify, Web App development, Project management, etc.
When I built Shopify apps, I had never used Liquid before but I learned hard and finished that customized and bug fix of FrancFranc EC Shop.
In particular, when I participated in a project to launch a new agency as PM and Developer, I was able to bring together 3 designers and 5 developers to achieve great results that released a new type of agency service.
I'm extremely motivated to gain new skills and knowledge, so challenged to work in a field I had never experienced.

FULL-STACK DEVELOPER

Netlearning Holdings | Japan | Apr 2018 - July 2021

About

This company serves e-learning systems and develops everything in-house. Joined after graduating.
As a full-stack developer had worked to build frontend to backend apps with C#(.Net), Java, JavaScript, HTML and CSS. The database was Microsoft SQL Server, and to automation was Jenkins.
I owned development to test, release, operate and maintain.

Accomplishments

• I have managed and operated a platform for 5,500 companies with a cumulative total of 80 million learners, achieving and maintaining a completion rate of over 90% for my clients.
• Developed Japan's first service is linking IMS's Blockchains type Open Badge with the company's LMS in 4 months.
• As the leader of the maintenance team, I improved the response method and followed up with the support team, resulting in a 35% increase in productivity and a 40% decrease in the number of requests.
